March 2012

### About Denlar

Denlar Fire Protection LLC is dedicated to providing high quality fire safety products to residential and institutional settings. With a growing product line of residential range hoods all based on our integrated range hood / wet chemical fire protection technology, our goal is to reduce the risk of cooking related fires in homes and institutions around the world. Denlar is the only company offering a complete line of fire suppression range hoods for the residential marketplace.

Be sure to visit us at the  
SMACNA Show on  
Tuesday, March 27th!

### Introducing the D1000 Series

Click on the image above  
to watch a video of the  
D1000 in action!

The D1000 by Denlar Fire Protection fulfills all of the theory and intent of the large, type one commercial hood system - just scaled down for residential grade appliances. Barring a commercial grade system, The D1000 is the highest level of protection available for a residential grade appliance. It has redefined the UL300A product category, becoming the standard by which all other Residential-Grade systems are measured. This model carries a UL300A listing which covers "automatic, commercial-style fire suppression systems for residential grade appliances". The UL300A listing is required for code driven installations.

### Standard Features of the D1000 include:

- UL300A Listed (Intertek/ETL)
- ICC ES Approved (due 6/2012)
- Automatic, Mechanical Actuation
- Standardized Fail Safe Components
- Pre-Engineered & Fully Integrated
- Easily Commissionable Design
- PLC Drive Monitoring System
- Multiple Fire Alarm Contacts

### Product Use for Institutions:

- University Dormitories
- Public / Military Housing
- Special Needs Housing
- Day Care Centers
- Elderly Housing
- Municipal Buildings
- Schools
- Churches
