

NOW REPRESENTING...

June 2010

For over 50 years, Herrmidifier has been designing and producing high quality solutions to indoor air humidification problems. Founded in Lancaster, PA,

Herrmidifier has known for decades that humidity control plays a large part in overall indoor air quality (IAQ). Today, under the umbrella of ASC, Herrmidifier continues to help a wide range of commercial and industrial customers improve their indoor air quality through proper humidification.

Herrmidifier's commercial product line includes:

- Air/Water Atomization System
- Self-Contained Electrode Boilers
- In-Duct Air/Water Atomization System
- CS Series Steam Distribution System
- HP Series Water Humidifier
- Steam-to-Steam Humidifier

As Innovators in Clean Air Technology™ for more than 45 years, Envirco Corporation manufactures a complete line of clean air systems for the micro-electronics, medical device, semiconductor, disk drive, laboratory and pharmaceutical markets, and many other industries requiring ultra-clean environments for critical technologies.

Known for product innovation and high quality, Envirco designed and manufactured the first commercial clean room, the first laminar flow surgical suite, the first personnel safety exhaust hood, and the first low profile fan filter unit (FFU). Continuing as the leader in product technology, it's the combination of innovative products with superior service and support that make Envirco the total clean air solution.

The MAC 10 IQ (shown below) is the world's first smart Fan Filter Unit (FFU). With its microcomputer controlled electrically commutative (EC) motor, the MAC 10 IQ dynamically adjusts itself to maintain the set airflow, compensating for changes in static pressure, filter loading or other local conditions. Competitively priced, the MAC 10 IQ offers low sound, low energy consumption and a low profile, with high performance and built-in intelligent control.

It's the combination of the GE ECM motor with Envirco's patented baffling system and forward curve fan that make the MAC 10 IQ intelligent and energy efficient. This unique merger combines Envirco's expertise in FFUs with GE's expertise in brushless DC electric motors.
